

## FAUNA WATER SUPPLY

This water collection system creates a water source for birds, reptiles and invertebrates on this generally waterless and drought prone island. The reintroduction of our smallest native bird, the rifleman ( *titipounamu* ) prompted its construction.

Along with 20 nesting boxes, a more readily available water supply will make life on Quarantine Island a little easier for the rifleman.

Overflow water is stored in a 220L drum for watering plantings.

**PLEASE DO NOT DISTURB.**
